

REPLIT PROMPT — YachtWorth: My Yacht & Yacht Profile (Foundation Layer)

CRITICAL CONTEXT

This is the FOUNDATION of the entire YachtWorth ecosystem. Every other tool (Charter Planner, Cost Estimator, Valuation, Digital Passport) connects to this central Yacht Profile.

Build this BEFORE connecting any other module to yacht data. Do NOT touch existing tools. Only build what is described here.

CORE PRINCIPLE

There are TWO modes across all YachtWorth tools:

Mode A — Quick Calculation (anonymous)

User enters yacht parameters to get a one-time result. No yacht needs to be saved. No login required for basic use. Used in: Valuation, Cost Estimator, Charter ROI. These remain unchanged — they always work without a saved yacht.

Mode B — My Yacht (named, persistent)

User has a real yacht in their fleet. Created ONCE in My Yacht section. Appears automatically in ALL tools that need a yacht selection. All results linked to this yacht build its history over time. Foundation for Digital Passport (future).

SUPABASE SCHEMA

Primary table: `yachts`

This is the single source of truth for all yacht data across the app.

```
create table yachts (  
  -- Identity  
  id uuid primary key default gen_random_uuid(),
```

```

user_id text not null,

-- Basic info
name text not null,
yacht_type text, -- 'Motor Yacht' | 'Sailing Yacht' | 'Catamaran' | 'Superyacht'
builder text,
model text,
year_built integer,
length_m numeric,
beam_m numeric,
draft_m numeric,

-- Registration
flag text,
registration_number text,
imo_number text,
hull_id text,
home_port text,
vat_status text, -- 'Tax Paid (EU)' | 'Tax Not Paid' | 'Unknown'

-- Engine
engine_maker text,
engine_model text,
engine_count integer,
total_hp integer,
engine_hours_current numeric,

-- Accommodation
guest_cabins integer,
crew_cabins integer,
berths integer,
heads integer,

-- Media
photo_url text,

-- Meta
role text default 'owner', -- 'owner' | 'broker' | 'manager'
notes text,
is_archived boolean default false,
created_at timestampz default now(),
updated_at timestampz default now()
);

-- Row level security
alter table yachts enable row level security;
create policy "Users manage own yachts"

```

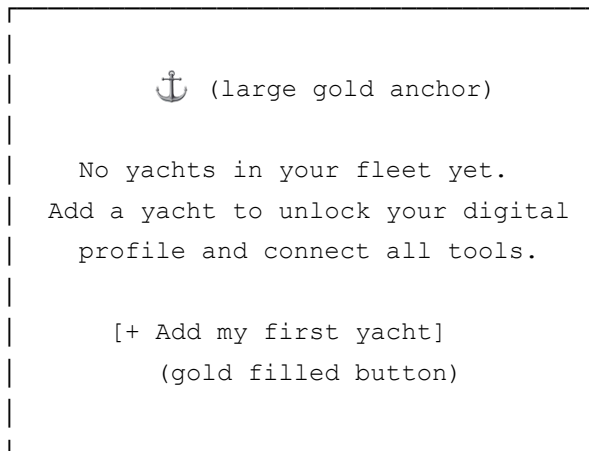

```
on yachts for all
using (user_id = auth.uid()::text);
```

Index for performance:

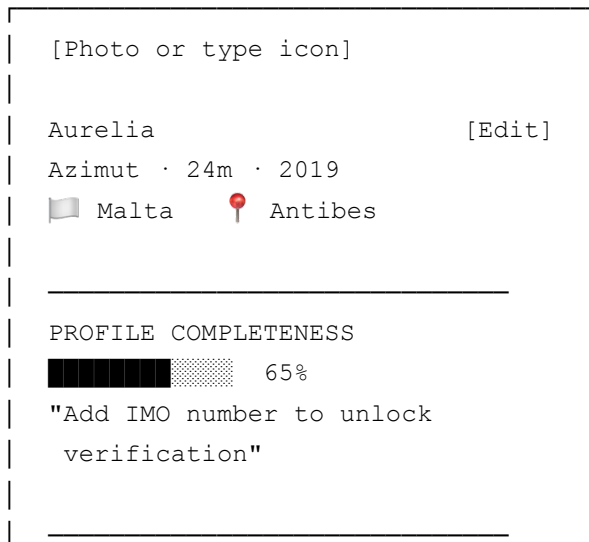

```
create index yachts_user_id_idx on yachts(user_id);
create index yachts_active_idx on yachts(user_id, is_archived);
```

MY YACHT SCREEN (Tab 3 in bottom nav)

Empty state:

With yachts — Yacht Card:

[ Valuations]	[ Costs]
[ 17 Charters]	[ Passport]

Profile completeness:

- Each filled field adds to % score
- Hint shows what to add next for higher score
- At 100% → unlocks “Verified Profile” badge (future)

Bottom 4 buttons on card:

- Valuations → filter History screen to this yacht’s valuations
- Costs → filter cost estimates to this yacht
- Charters → open Charter Planner filtered to this yacht
- Passport → COMING SOON modal (future feature)

If user has multiple yachts:

- Horizontal scroll or vertical list of cards
- [+ Add another yacht] button below last card

ADD / EDIT YACHT FORM

Full-screen form. Scrollable. Sections are collapsible. Save button sticky at bottom.

Section 1: BASICS (required to save)

YACHT NAME *

[Aurelia_____]

TYPE *

[Motor Yacht] [Sailing] [Catamaran] [Superyacht]

BUILDER / YARD

[e.g. Azimut, Sunseeker, Ferretti_____]

MODEL

[e.g. Grande 24M, Predator 74_____]

YEAR BUILT *

[2019]

YOUR ROLE

[Owner] [Broker / Manager] [Charter Manager]

Section 2: DIMENSIONS

LENGTH (LOA) *

[24] m [Switch to FT]

BEAM

[____] m

DRAFT

[____] m

Section 3: REGISTRATION

FLAG / COUNTRY

[Malta_____] (searchable dropdown of countries)

HOME PORT

[Antibes_____]

REGISTRATION NUMBER

[_____]

IMO NUMBER

[_____]

 "Needed for verification and Digital Passport"

HULL ID (HIN)

[_____]

VAT STATUS

[Tax Paid (EU free circulation)]

[Tax Not Paid / Offshore]

[Unknown]

Section 4: ENGINE

ENGINE MAKER

[e.g. MAN, MTU, Volvo Penta_____]

ENGINE MODEL

[e.g. V12-1800_____]

NUMBER OF ENGINES

[-] 2 [+]

TOTAL HORSEPOWER

[_____] HP

CURRENT ENGINE HOURS

[_____] hrs

"Used in Charter Planner to track hours per trip"

Section 5: ACCOMMODATION

GUEST CABINS [-] 3 [+]

CREW CABINS [-] 1 [+]

BERTHS [-] 6 [+]

HEADS / WC [-] 3 [+]

Section 6: PHOTO

 Add photo]

Tap to upload from camera roll
or take a new photo

Section 7: NOTES

NOTES

[Free text field, multiline]

Bottom action bar:

[Cancel]

[Save Yacht ✓]

On save:

- Validate required fields (name, type, year, length)

- Save to Supabase `yachts` table
- Return to My Yacht screen
- Show success toast: "Aurelia added to your fleet"

YACHT DETAIL SCREEN

Accessed by tapping yacht card (not edit button).

Header:

 back Aurelia  menu

Menu: Edit · Duplicate · Archive · Delete

Content:

Tab bar:

 Overview  History  Documents

Overview tab:

Display all saved yacht data in clean read-only format. Group by sections matching the form. Each section has an [Edit] shortcut.

Show completeness bar again with specific missing fields listed.

History tab:

Chronological list of all events linked to this yacht:

	Valuation	Jun 15, 2026	€1,850,000
	Cost Estimate	Jun 10, 2026	€124,000/yr
	Charter	Jun 1-8, 2026	John Smith · €14,000
	Valuation	Mar 3, 2026	€1,820,000

Each row tappable → opens original record. Filter by type: [All] [Valuations] [Costs] [Charters]

Documents tab:

COMING SOON placeholder:

```
[🔒 Documents]
Upload registration papers,
survey reports and more.
Coming soon.
```

CONNECTION TO OTHER TOOLS

How other tools use My Yacht:

In Valuation, Cost Estimator, Charter ROI: At the top of each tool, show optional banner:

```
| 🔗 Link to a yacht in your fleet |
| [Select yacht ▼] or [Skip →] |
```

If user selects a yacht:

- Pre-fill form fields from yacht profile (length, type, year, engine specs)
- After completion, save result to yacht's history

If user skips:

- Tool works exactly as today — anonymous quick calculation
- Result is NOT saved to any yacht history

In Charter Planner: Fleet view shows ONLY yachts from My Yacht. "Add yacht to fleet" button → goes to My Yacht → Add Yacht form. Cannot add a charter without first having a yacht in My Yacht.

YACHT SELECTOR COMPONENT (reusable)

Build a reusable `YachtSelector` component used across all tools:

```
// YachtSelector.jsx
// Props:
//   selectedYachtId: string | null
```

```
//  onSelect: (yacht) => void
//  onSkip: () => void
//  required: boolean (if true, no skip option)

// Renders:
// - If no yachts in fleet: "Add a yacht first" CTA
// - If yachts exist: scrollable list of yacht cards (compact)
// - Each card: name, type, length, year
// - Selected card gets gold border
// - "Continue without linking" link below (if required=false)
```

PROFILE COMPLETENESS LOGIC

```
// completenessScore.js
const FIELDS = [
  { key: 'name',          weight: 10, label: 'Yacht name' },
  { key: 'yacht_type',    weight: 5,  label: 'Type' },
  { key: 'year_built',    weight: 5,  label: 'Year built' },
  { key: 'length_m',      weight: 5,  label: 'Length' },
  { key: 'builder',       weight: 5,  label: 'Builder' },
  { key: 'flag',          weight: 5,  label: 'Flag' },
  { key: 'home_port',     weight: 5,  label: 'Home port' },
  { key: 'registration_number', weight: 5,  label: 'Registration number' },
  { key: 'imo_number',    weight: 10, label: 'IMO number' },
  { key: 'hull_id',       weight: 5,  label: 'Hull ID' },
  { key: 'vat_status',    weight: 5,  label: 'VAT status' },
  { key: 'engine_maker',  weight: 5,  label: 'Engine maker' },
  { key: 'engine_count',  weight: 5,  label: 'Engine count' },
  { key: 'total_hp',      weight: 5,  label: 'Horsepower' },
  { key: 'engine_hours_current', weight: 5,  label: 'Current engine hours' },
  { key: 'guest_cabins',  weight: 5,  label: 'Cabins' },
  { key: 'photo_url',     weight: 5,  label: 'Photo' },
  { key: 'notes',         weight: 0,  label: 'Notes' }, // bonus, no weight
];

export function calcCompleteness(yacht) {
  const total = FIELDS.reduce((s, f) => s + f.weight, 0);
  const filled = FIELDS.reduce((s, f) => {
    const val = yacht[f.key];
    return s + (val !== null && val !== undefined && val !== '' ? f.weight : 0);
  }, 0);
  return Math.round((filled / total) * 100);
}
```

```
export function nextSuggestedField(yacht) {
  return FIELDS.find(f => {
    const val = yacht[f.key];
    return f.weight > 0 && (val === null || val === undefined || val === '');
  });
}
```

FILE STRUCTURE

```
/screens/MyYacht/
  MyYachtScreen.js      ← fleet list, empty state
  YachtDetailScreen.js  ← overview / history / documents tabs
  AddYachtScreen.js     ← full add/edit form

/components/MyYacht/
  YachtCard.js          ← fleet card with completeness bar
  YachtSelector.js      ← reusable selector for other tools
  CompletenessBar.js    ← progress bar + hint
  YachtHistoryItem.js   ← row in history tab

/utils/
  completenessScore.js  ← score + next field suggestion
  yachtHelpers.js       ← format helpers (length ft-m, etc)

/hooks/
  useMyYachts.js        ← fetch all user yachts from Supabase
  useYachtDetail.js     ← fetch single yacht + linked history
```

PRIORITY BUILD ORDER

1. Supabase table + RLS policy
2. useMyYachts.js hook
3. AddYachtScreen.js — the form (most important)
4. MyYachtScreen.js — fleet list + empty state
5. YachtCard.js + CompletenessBar.js
6. completenessScore.js

7. `YachtDetailScreen.js` — overview tab
 8. `YachtDetailScreen.js` — history tab
 9. `YachtSelector.js` — reusable component
 10. Connect YachtSelector banner to existing Valuation tool
 11. Connect Charter Planner fleet to My Yacht
-

IMPORTANT RULES

1. The `yachts` table is the ONLY place yacht data is created and stored. Charter Planner, Cost Estimator, Valuation — they READ from this table, they do NOT create their own yacht records.
 2. Quick calculations (anonymous mode) NEVER write to the `yachts` table. They are stateless — input in, result out, nothing saved unless user explicitly chooses to link to a yacht.
 3. When a tool result is linked to a yacht, save a reference record:
 - `valuation_id` + `yacht_id` in `valuations` table
 - `charter_id` + `yacht_id` in `charters` table
 - `cost_estimate_id` + `yacht_id` in `cost_estimates` table This builds the yacht history without modifying the yacht record itself.
 4. The Digital Passport (future) will simply be a public view of: yacht record + linked valuations + linked charters + linked surveys All using the same `yacht_id`. No new data model needed later.
 5. Do NOT build the passport now. Just ensure `yacht_id` is used consistently.
