

REPLIT — Yacht Proposal PDF: Replace with ready code

TASK

Replace your existing proposal PDF generator with the attached file.

STEPS

1. Copy the attached file `proposalBuilder.js` into your project:

```
/utils/proposalBuilder.js
```

2. In `ProposalPreviewScreen.js` (or wherever you call PDF generation), replace the import:

```
// REMOVE whatever you have now and replace with:  
import { buildProposalHTML, generateProposalPDF } from '../utils/proposalBuilder'
```

3. To generate the PDF, call:

```
// Fetch data first  
const { data: yacht } = await supabase  
  .from('yachts')  
  .select('*')  
  .eq('id', yachtId)  
  .single();  
  
const { data: equipment } = await supabase  
  .from('yacht_equipment')  
  .select('*')  
  .eq('yacht_id', yachtId);  
  
// Then generate  
await generateProposalPDF(yacht, equipment, settings);
```

4. The `settings` object comes from your `ProposalSettingsScreen` form state:

```
const settings = {
  proposalType:      'both',           // 'sale' | 'charter' | 'both'
  askingPrice:       1000000,          // number
  priceOnApplication: false,           // boolean
  charterRateHigh:   8500,             // number, per week
  charterRateLow:    5500,             // number, per week
  charterOnApplication: false,         // boolean
  apaPercent:       30,               // number
  charterArea:       'Mediterranean',
  mybaContract:      true,
  delivery:          'Immediate',
  seaTrial:          'On request',
  brokerName:        'Your Name',
  brokerageName:     'Your Company',
  email:             'you@example.com',
  phone:             '+33 6 00 00 00 00',
  website:           'yoursite.com',
  notes:             'Optional notes about the vessel',
};
```

DO NOT MODIFY proposalBuilder.js

The CSS and HTML in that file are final and approved. Do not change fonts, colors, spacing or layout. Do not redesign anything.

THAT IS ALL

No other changes needed. The file is complete and ready to use as-is.
