

Replit Prompt — YachtWorth: Annual Ownership Cost Calculator

New Module for Existing App

CONTEXT & OBJECTIVE

Build a new screen/module for the existing YachtWorth mobile app (React Native or React, matching the existing dark navy/gold aesthetic already in the app). This module is called **"Annual Cost Estimator"** — it allows yacht owners, buyers and brokers to calculate the total annual cost of owning a specific yacht.

The module must feel native to the existing YachtWorth design system:

- Dark navy background: #0D1B2A
 - Gold accent: #C5973A
 - Card background: #1A2B3C
 - Text primary: #FFFFFF
 - Text secondary: #8899AA
 - Border/divider: #2A3B4C
 - Success/active: #2ECC71
 - Font: match existing app font
-

MODULE STRUCTURE

The module has 4 sequential steps (like the existing valuation flow: step 1/4, 2/4 etc.) plus a Results screen.

Step 1 — Basics **Step 2 — Operations**

Step 3 — Expenses

Step 4 — Financing

STEP 1 — BASICS

Fields:

- **Yacht name** (text input, optional) — label: "Yacht name (optional)"
 - **Yacht class** — pill selector: Motor Yacht / Sailing Yacht / Catamaran / Superyacht
 - **Length (LOA)** — numeric input with M/FT toggle (same as existing valuation flow)
 - **Build year** — numeric input (e.g. 2019)
 - **Region of operation** — pill selector:
 - Mediterranean
 - Northern Europe
 - Caribbean
 - Asia-Pacific
 - Middle East
 - Global
 - **Usage type** — pill selector: Private use only / Mixed (private + charter) / Charter focused
-

STEP 2 — OPERATIONS (CREW)

This is the most detailed section. Title: **"Crew · By Position"**

Subtitle: *"Add only the positions that apply. Set monthly salary and number of months worked per year."*

Crew positions — each position has:

1. **Toggle** to enable/disable the position (off by default except Captain which is on by default for yachts 15m+)
2. **Monthly salary** input (€/mo) — numeric

3. **Months per year** stepper (1–12) with – and + buttons — default 12

4. **Calculated annual cost** shown inline: = € x,xxx

Positions list (in this exact order):

Position	Default salary hint	Notes
Captain	e.g. €4,000/mo	Always shown first
First Officer / Mate	e.g. €3,000/mo	
Chief Engineer	e.g. €3,500/mo	
Chef / Cook	e.g. €2,500/mo	
Stewardess	e.g. €2,000/mo	Quantity selector 1–4
Deckhand	e.g. €1,800/mo	Quantity selector 1–4
Bosun	e.g. €2,200/mo	
Security	e.g. €2,500/mo	Optional, for superyachts

Special behavior for Stewardess and Deckhand:

These positions have an additional **quantity selector** (1 / 2 / 3 / 4) shown as small pill buttons next to the position name. The annual cost multiplies by quantity automatically.

Example UI for Stewardess:

[✓] Stewardess [1] [2] [3] [4]
€ / mo: [2000] Months: [-] 8 [+] = € 16,000 / yr

Crew subtotal:

Show a running **“Total crew cost: € XX,XXX / yr”** at the bottom of this section, updating in real time.

STEP 3 — EXPENSES

Divided into two sub-sections:

Monthly expenses (€/month):

- **Mooring / Berth** — hint: "Marina contract or rolling fees" — default suggestion based on region and length
- **Fuel** — hint: "Average across the season"
- **Provisioning** — hint: "Food, drink, consumables"
- **Communications** — hint: "Satellite, Wi-Fi, phone"
- **Routine maintenance** — hint: "Servicing, small repairs" — auto-estimated: show light grey suggested value based on yacht length

Annual expenses (€/year):

- **Insurance** — hint: "Hull + P&I, full annual premium" — auto-estimated suggestion shown in grey
- **Registration / Flag** — hint: "Annual flag-state fees"
- **Classification & Survey** — hint: "Class society, MCA, audits"
- **Antifouling & Haul-out** — hint: "Yearly bottom service"
- **Refit reserve** — hint: "Money set aside for major refit"

Charter section (visible only if Step 1 usage = Mixed or Charter):

- **Broker commission** — % input — default 20%

Auto-estimates:

For Insurance and Routine maintenance, show a suggested value in light gold italic below the input: *"Suggested: €X,XXX based on yacht profile"* The user can accept (tap to fill) or override manually.

Expenses subtotal:

Show **"Total annual expenses: € XX,XXX"** updating in real time.

STEP 4 — FINANCING

- **Financing type** — pill selector: `Cash purchase / Loan / financing`

If **Loan / financing** selected, show:

- **Loan amount (€)** — numeric input
- **Interest rate (%)** — numeric, e.g. 5.5
- **Term (years)** — numeric, e.g. 10
- → **Calculated annual loan payment: € X,XXX / yr** — shown automatically

If **Cash purchase** — this section is minimal, just confirm and proceed.

RESULTS SCREEN

Header:

TOTAL ANNUAL COST
€ XX,XXX

In large gold text, same style as valuation result.

Breakdown cards (collapsible sections):

1. Crew — € XX,XXX

- List each active position: Captain €48,000 · 12 months · ×1

2. Mooring & Operations — € XX,XXX

- Monthly items annualized

3. Maintenance & Technical — € XX,XXX

- Insurance, antifouling, survey, refit reserve

4. Financing — € XX,XXX (or "Cash purchase — no financing cost")

Visual breakdown:

Horizontal stacked bar or donut chart showing % of each category. Colors: Crew = gold, Operations = blue-grey, Maintenance = teal, Financing = orange.

Cost per day / per week:

Cost per day: € XXX
Cost per week: € X,XXX

Charter offset (if applicable):

If usage type = Mixed or Charter:

Charter revenue needed to break even: X weeks/year

PDF Export button:

Export PDF Report — gold outlined button — generates a clean PDF with all data.

Scenario note:

Small italic text at bottom: *"This estimate is indicative and based on user-provided data. Actual costs may vary. Consult a licensed yacht management firm for certified advice."*

SAVE & HISTORY FUNCTIONALITY

Save button on Results screen:

Save this estimate — saves the complete calculation with:

- Auto-generated name: "Yacht name · €XX,XXX/yr · [date]" or "My Yacht · €XX,XXX/yr · [date]" if no name
- Timestamp
- All input values
- Total result

History screen (accessible from Home via "Your estimates" or history icon):

- List of saved estimates, newest first
- Each card shows: yacht name, total annual cost, date saved
- **Swipe left to delete** (or delete icon on card)
- **Tap to reopen** — loads all saved values back into the form for editing
- **"Run another scenario"** button on Results screen — resets form but keeps yacht basics (length, class, year)

Reset button:

- Available on every step as a secondary action: `Reset form`
- Shows confirmation dialog: *"Reset all fields? This cannot be undone."*
- Confirmation: `Reset` (red) / `Cancel`

Storage:

Use `AsyncStorage` (React Native) or `localStorage` (React web) to persist saved estimates between sessions. Each estimate stored as JSON with unique ID (uuid or timestamp-based).

NAVIGATION & FLOW

- Progress indicator at top: `Step X of 4` with linear progress bar (gold fill)
 - `← Back` arrow top left
 - `Continue →` primary gold button bottom
 - On Step 4: button becomes `Calculate` with a small calculator icon
 - Results screen: no step indicator, just `← Edit` top left
-

FORM VALIDATION

- Yacht length: required, 5–120m
 - Build year: required, 1950–2026
 - Numeric inputs: no negative values, reasonable maximums (flag a warning if monthly salary > €50,000 or annual insurance > €500,000 — show warning but allow)
 - Charter weeks: 1–52 validation (already exists in app)
 - At least one expense field must be non-zero to proceed to results
-

TECHNICAL REQUIREMENTS

- Match existing app component library exactly — reuse existing: `PillSelector`, `NumericInput`, `StepperInput`, `ProgressBar`, `CardContainer`, `GoldButton`, `SecondaryButton` components

- All monetary values formatted with thousands separator: € 48,000 not €48000
 - M/FT toggle for length must sync with existing app preference (if user set FT in valuation, show FT here too)
 - Real-time calculation — totals update as user types, no need to press Calculate until final step
 - Support both portrait and landscape orientation
 - Accessible: all inputs labeled, sufficient contrast ratios
-

FILE STRUCTURE (suggested)

```
/screens
  /CostEstimator
    index.js           - main screen router
    Step1Basics.js
    Step2Crew.js
    Step3Expenses.js
    Step4Financing.js
    ResultsScreen.js
    HistoryScreen.js

/components/CostEstimator
  CrewPositionRow.js  - reusable row with toggle, salary, months, quantity
  ExpenseRow.js       - reusable row with label, hint, input, suggestion
  CostBreakdownChart.js - donut/bar chart for results
  SavedEstimateCard.js - card for history list

/utils
  costCalculations.js - all calculation logic (pure functions, easy to test)
  storageHelpers.js   - save/load/delete from AsyncStorage
  autoEstimates.js    - logic for suggested values based on yacht profile
```

AUTO-ESTIMATE LOGIC (autoEstimates.js)

Suggested values based on yacht length and region:

```
// Insurance estimate: ~1% of yacht market value
// Rough market value by length:
// 15m = €400K, 20m = €900K, 24m = €1.8M, 30m = €3M, 40m = €6M
```

```

function estimateInsurance(lengthM, year) {
  const baseValue = estimateYachtValue(lengthM, year);
  return Math.round(baseValue * 0.01);
}

// Routine maintenance: 5-10% of yacht value per year
function estimateMaintenance(lengthM, year) {
  const baseValue = estimateYachtValue(lengthM, year);
  return Math.round(baseValue * 0.06 / 12); // monthly
}

// Mooring by region and length (€/month):
const mooringRates = {
  mediterranean: { base: 800, perMeter: 120 }, // per meter per month
  caribbean: { base: 600, perMeter: 90 },
  northern_europe: { base: 500, perMeter: 70 },
};

```

EXAMPLE FILLED STATE (for reference/testing)

Yacht: "Aurelia" | Motor Yacht | 24m | 2019 | Mediterranean | Mixed use

CREW:

- Captain: €4,000/mo × 12mo = €48,000
- Chef: €2,500/mo × 8mo = €20,000
- Stewardess ×2: €2,000/mo × 8mo = €32,000
- Deckhand ×1: €1,800/mo × 6mo = €10,800

Crew total: €110,800

MONTHLY EXPENSES (×12):

- Mooring: €2,500/mo = €30,000
- Fuel: €1,200/mo = €14,400
- Provisioning: €400/mo = €4,800
- Communications: €300/mo = €3,600
- Routine maintenance: €1,125/mo = €13,500

Monthly total: €66,300

ANNUAL EXPENSES:

- Insurance: €18,000
- Registration/Flag: €500
- Antifouling & haul-out: €8,000

Annual total: €26,500

FINANCING: Cash purchase

GRAND TOTAL: €203,600/yr

Cost per day: €558

Cost per week: €3,915

PRIORITY ORDER FOR DEVELOPMENT

1. Step 1 (Basics) + navigation skeleton
2. Step 2 (Crew) — most complex, build CrewPositionRow component first
3. Step 3 (Expenses) with auto-estimates
4. Results screen with breakdown
5. Save/History functionality
6. Step 4 (Financing)
7. PDF export
8. Polish: animations, auto-estimates refinement

This module is part of the YachtWorth App ecosystem by PDYE Group. Design must match existing app dark navy/gold aesthetic exactly. All components should be reusable and follow existing code conventions.
