

REPLIT PROMPT — YachtWorth Charter: Update PDF Report Template

CONTEXT

Replace the existing charter PDF report template with a new professional HTML template. Do NOT change any other screens or logic. Only the PDF generation output changes.

TASK

Replace the current PDF generation with the attached HTML template

`charter_report_v4.html`.

The template uses:

- System font: `Helvetica Neue, Helvetica, Arial, sans-serif` — no external fonts
 - `-webkit-print-color-adjust: exact` — all backgrounds and colors render in PDF
 - All styles are inline in `<style>` tag — no external CSS
-

HOW TO GENERATE PDF

Use `expo-print` to convert the HTML string to PDF:

```
import * as Print from 'expo-print';
import * as Sharing from 'expo-sharing';

export async function generateCharterPDF(charter) {
  const html = buildCharterHTML(charter); // see below
  const { uri } = await Print.printToFileAsync({ html, base64: false });
  await Sharing.shareAsync(uri, {
    mimeType: 'application/pdf',
    dialogTitle: `Charter Report — ${charter.yachtName}`,
    UTI: 'com.adobe.pdf',
  });
}
```

DYNAMIC DATA — replace all hardcoded values

Use this mapping to replace template placeholders with real charter data:

```
function buildCharterHTML(c) {
  // c = charter object from Supabase

  const days = daysBetween(c.start_date, c.end_date);

  // VAT (added on top)
  const baseNet = c.charter_rate_type === 'per_day'
    ? c.charter_rate * days
    : c.charter_rate_type === 'per_week'
    ? c.charter_rate * (days / 7)
    : c.charter_rate;

  const vatAmount = c.vat_applicable ? baseNet * (c.vat_percent / 100) : 0;
  const totalClient = baseNet + vatAmount;

  // APA
  const apaAmount = c.apa_enabled ? baseNet * (c.apa_percent / 100) : 0;
  const apaSpent = (c.apa_fuel||0) + (c.apa_provisioning||0) + (c.apa_beverages|
    + (c.apa_marina_fees||0) + (c.apa_communications||0)
    + (c.apa_crew_gratuities||0) + (c.apa_activities||0) + (c.apa_o
  const apaBalance = apaAmount - apaSpent;

  const totalInvoice = totalClient + apaAmount;

  // Crew
  const captainTotal = (c.captain_day_rate||0) * days;
  const firstOfficerTotal= (c.first_officer_day_rate||0) * days;
  const stewardessTotal = (c.stewardess_count||0) * (c.stewardess_day_rate||0) *
  const chefTotal = c.chef_included ? (c.chef_day_rate||0) * days : 0;
  const deckhandTotal = (c.deckhand_count||0) * (c.deckhand_day_rate||0) * day
  const totalCrew = captainTotal + firstOfficerTotal + stewardessTotal
    + chefTotal + deckhandTotal + (c.extra_crew_cost||0);

  // Fuel
  const fuelCost = (c.fuel_liters||0) * (c.fuel_price_per_liter||0);

  // Distribution (from charter_distribution table, pre-loaded)
  const distributions = c.distributions || [];
  const totalDistributed = distributions.reduce((s, d) => s + d.calculated_amount
```

```

const boatOwner = distributions.find(d => d.participant_name === 'Boat Owner');

// P&L
const totalCommissions = distributions
  .filter(d => d.participant_name !== 'Boat Owner')
  .reduce((s, d) => s + d.calculated_amount, 0);
const netProfit = baseNet - totalCommissions - totalCrew - fuelCost
  - (c.extra_service_amount||0) - (c.damage_amount||0);
const margin = baseNet > 0 ? (netProfit / baseNet * 100).toFixed(1) : 0;

const fmt = (n) => `€\u2009${Math.abs(n).toLocaleString('en-GB', {minimumFracti
const fmtDate = (d) => d ? new Date(d).toLocaleDateString('en-GB', {day:'2-digi
const statusColor = { confirmed:'#C5973A', tentative:'#3498DB', cancelled:'#E74

// Build APA rows (only non-zero items)
const apaRows = [
  { label: 'Fuel', value: c.apa_fuel },
  { label: 'Provisioning / Food',value: c.apa_provisioning },
  { label: 'Beverages / Alcohol',value: c.apa_beverages },
  { label: 'Marina / Port fees', value: c.apa_marina_fees },
  { label: 'Communications', value: c.apa_communications },
  { label: 'Crew gratuities', value: c.apa_crew_gratuities },
  { label: `Activities${c.apa_activities_note ? ': '+c.apa_activities_note : ''`
  { label: `Other${c.apa_other_note ? ': '+c.apa_other_note : ''}`, value: c.ap
].filter(r => r.value > 0);

// Build distribution rows
const distRows = distributions.map(d => `
  <div class="dist-row">
    <span class="dl">${d.participant_name}<span class="dpct">(${d.percent_value
    <span class="dv ${d.participant_name === 'Boat Owner' ? 'gold' : ''}>${fmt
  </div>
`);

// Build crew rows (only included positions)
const crewRows = [
  c.captain_day_rate ? `<tr><td class="label">Captain</td><td class="value">
  c.first_officer_day_rate ? `<tr><td class="label">First Officer</td><td class
  c.stewardess_count ? `<tr><td class="label">Stewardess &times;${c.stewarde
  c.chef_included ? `<tr><td class="label">Chef</td><td class="value">${f
  c.deckhand_count ? `<tr><td class="label">Deckhand &times;${c.deckhand_c
  c.extra_crew_cost ? `<tr><td class="label">Extra crew</td><td class="valu
].filter(Boolean).join('');

// NOW INSERT ALL VALUES INTO THE HTML TEMPLATE BELOW
// (copy charter_report_v4.html and replace hardcoded values)
return `<!DOCTYPE html>...` // full HTML from charter_report_v4.html with value

```

}

SECTIONS IN PDF (in this exact order)

1. **Header** — YachtWorth · Charter | Trip Report | Confidential | date
 2. **Gold line** — 3px gradient
 3. **Hero** — yacht name large, dates, ports, time, status pill | Net Profit + Boat Owner Receives
 4. **Client + Logistics** — two columns
 5. **Revenue & Payments** — base net, VAT on top, total to client, APA, total invoice, deposit status, final payment status
 6. **Crew + Vessel** — two columns
 7. **APA Account block** — green block, only if APA enabled, only non-zero expense rows, balance
 8. **Income Distribution** — dark block, all participants with %, balanced indicator
 9. **P&L Summary** — dark block, revenue minus all deductions, net profit large
 10. **APA/VAT note** — small italic note explaining exclusions
 11. **Footer** — disclaimer + YachtWorth / Powered by PDYE Group
-

IMPORTANT RULES

1. Use the HTML from `charter_report_v4.html` as the EXACT visual template
2. All monetary values: € 1,234 format with thin space after €
3. VAT is always shown as ADDITION to base price, never subtraction
4. APA section: only show if `c.apa_enabled === true`
5. APA expense rows: only show rows where value > 0
6. APA balance: green text + "Refund to client" if positive, red + "Additional payment required" if negative

7. Distribution rows: show ALL participants from charter_distribution table
 8. Boat Owner amount: always gold color
 9. Balanced indicator: green ✓ if difference < €0.01, red ⚠ with amount if not
 10. Crew rows: only show positions that are included/non-zero
 11. Engine hours row: only show if engine_hours_before and engine_hours_after both filled
 12. Extra service / Damage rows: only show if amount > 0
 13. PDF filename: Charter_\${yachtName}_\${startDate}.pdf
 14. Do NOT use Google Fonts — system fonts only
 15. Add `-webkit-print-color-adjust: exact` to body
-

ATTACHED FILE

`charter_report_v4.html` — use this as the exact visual reference and base template.
