

REPLIT PROMPT — Charter Planner: Corrections & Fixes

CONTEXT

This is a corrections prompt for the Charter Planner module. Apply ONLY the changes listed below. Do not modify anything else.

FIX 1: Rename "AA Commission" → "Central Agent Commission"

"AA" was a specific company name used as example. Replace everywhere in the app, database and PDF with a generic term.

Changes:

- All UI labels: `AA Commission` → `Central Agent`
- Database column: keep as-is technically, but display label changes
- PDF report: `AA Commission` → `Central Agent`
- Income Distribution section default participant name: `Central Agent`
- Payout Summary card: `Central Agent`
- Any hardcoded string "AA" related to agent → `Central Agent`

The Central Agent is the main charter broker who holds the central listing agreement with the boat owner.

FIX 2: Commission structure — Central Agent + Sub-agents

Replace the fixed single "Agent Commission" field with a flexible commission structure.

New structure in Income Distribution section:

COMMISSION STRUCTURE

CENTRAL AGENT COMMISSION

Type: [% of net] [Fixed €]

Value: [____] Amount: €X,XXX ← auto

SUB-AGENT COMMISSION

☐ Include sub-agent

Sub-agent name: [_____]

Type: [% of net] [% of central agent fee] [Fixed €]

Value: [____] Amount: €X,XXX ← auto

[+ Add another sub-agent] ← up to 3 sub-agents

Total commissions: €X,XXX

Commission calculation logic:

```
// Central agent commission
const centralAgentAmount = type === 'percent_net'
  ? baseNet * (centralAgentPercent / 100)
  : centralAgentFixed;

// Sub-agent commission options:
// Option A: % of net charter price
const subAgentAmountA = baseNet * (subAgentPercent / 100);

// Option B: % of central agent's commission
const subAgentAmountB = centralAgentAmount * (subAgentPercent / 100);

// Option C: fixed amount
const subAgentAmountC = subAgentFixed;
```

In Payout Summary — show all participants:

PAYOUT SUMMARY			
	Boat Owner	€X,XXX	(XX%)
	Central Agent	€X,XXX	(XX%)
	[Sub-agent name]	€X,XXX	(XX%)

 [Sub-agent 2 name]	€X,XXX	(XX%)
[Custom participant]	€X,XXX	(XX%)
Base net revenue:	€X,XXX	
Total distributed:	€X,XXX	
✓ Balanced or  Difference:	€X,XXX	

FIX 3: APA expenses — show both € amount AND label clearly

Current issue: APA expense fields show only € input, it's unclear what currency/unit.

Fix — each APA expense row must show:

FUEL

[_____] € ← numeric input, € symbol on right inside field

e.g. 1,250 €

PROVISIONING / FOOD

[_____] €

BEVERAGES / ALCOHOL

[_____] €

MARINA / PORT FEES

[_____] €

COMMUNICATIONS (satellite, WiFi)

[_____] €

CREW GRATUITIES

[_____] €

ACTIVITIES / EXTRAS

[_____] €

Description: [_____]

OTHER

[_____] €

Description: [_____]

Rules:

- Currency symbol € always visible INSIDE the input field on the right side
- Placeholder text shows example: e.g. 1,250
- Input type: numeric, decimal allowed
- All APA expense fields default to 0 (empty shows placeholder, not 0)
- Below each non-zero field show the value formatted: € 1,250.00
- Running total updates live

APA Summary box (below expenses):

APA ACCOUNT			
APA budget received:	€ X,XXX		
- Fuel:	€ X,XXX		
- Provisioning:	€ X,XXX		
- Beverages:	€ X,XXX		
- Marina fees:	€ X,XXX		
- Communications:	€ X,XXX		
- Crew gratuities:	€ X,XXX		
- Activities:	€ X,XXX		
- Other:	€ X,XXX		
Total spent:	€ X,XXX		
BALANCE:	€ X,XXX	✓	← green: refund to client
or			
BALANCE:	-€ X,XXX	⚠	← red: client owes more

Only show expense rows that have a value > 0 in the summary box.

FIX 4: Time fields — enforce 24-hour format automatically

Fields affected:

- Departure time
- Return time

Behavior:

- Input type: numeric only
- Format enforced: HH:MM (24-hour)
- As user types, auto-format:
 - User types 9 → shows 09: wait for next digit
 - User types 14 → shows 14: wait for minutes
 - User types 1430 → auto-formats to 14:30
 - User types 930 → auto-formats to 09:30
- Validation:
 - Hours: 00–23 only. If user enters 25 → reset to 23
 - Minutes: 00–59 only. If user enters 65 → reset to 59
- Display format always: HH:MM (e.g. 06:00 , 14:30 , 23:59)
- Placeholder: HH:MM
- No AM/PM — 24-hour only, no exceptions

Implementation (React Native):

```
// TimeInput component
const formatTime = (input) => {
  const digits = input.replace(/\D/g, '').slice(0, 4);
  if (digits.length <= 2) {
    const h = Math.min(parseInt(digits) || 0, 23);
    return digits.length === 2 ? `${String(h).padStart(2, '0')}:` : digits;
  }
  const h = Math.min(parseInt(digits.slice(0, 2)) || 0, 23);
  const m = Math.min(parseInt(digits.slice(2, 4)) || 0, 59);
  return `${String(h).padStart(2, '0')}:${String(m).padStart(2, '0')}`;
};

// Show as: 14:30
// Validate on blur: ensure format is HH:MM before saving
const validateTime = (value) => /^[01]\d|2[0-3]:([0-5]\d)$/.test(value);
```

SUMMARY OF CHANGES

#	What	Where
1	Rename AA → Central Agent	UI, PDF, all labels
2	Central Agent % + Sub-agents with flexible % type	Income Distribution section
3	APA expense fields: € symbol visible, clear labels, summary box	APA Expenses section
4	Time fields: 24h auto-format, HH:MM enforced	Departure & Return time fields

Do not change anything else in the module.
