

REPLIT PROMPT — Yacht Proposal PDF: Fix 4 Specific Issues

CONTEXT

Apply ONLY these 4 fixes to the existing Yacht Proposal PDF generator. Do not change anything else.

FIX 1: Equipment page — show items correctly, not as plain text list

Current problem:

Equipment shows as a plain text list with dashes (—inverter, —solar panels...) All items dumped without categories or grouping.

Root cause:

The equipment_type values from Supabase are being rendered directly without matching to human-readable labels and without being grouped by category.

Fix:

```
// In proposalBuilder.js — replace equipment rendering logic
```

```
const CATEGORY_LABELS = {
  power_electrical: 'Power & Electrical',
  navigation:      'Navigation & Communication',
  water_systems:   'Water Systems',
  comfort_climate: 'Comfort & Climate',
  safety:          'Safety',
  water_toys_tenders: 'Tenders & Water Toys',
  deck_anchoring:  'Deck & Anchoring',
  sailing:         'Sailing Equipment',
};
```

```
const NOTABLE_TYPES = [
```

```

    'generator', 'stabilizer', 'starlink', 'watermaker',
    'tender', 'jetski', 'gyro_stabilizer', 'vsat', 'air_conditioning_central'
];

function formatEquipLabel(item) {
    // Build readable label from item fields
    let label = '';
    if (item.quantity > 1) label += item.quantity + ' × ';
    if (item.brand) label += item.brand + ' ';
    if (item.model) label += item.model + ' ';
    // Convert snake_case type to readable
    label += item.equipment_type.replace(/_/g, ' ');
    if (item.power_kw) label += ' (' + item.power_kw + ' kW)';
    if (item.capacity_liters) label += ' (' + item.capacity_liters + ' L/hr)';
    if (item.hours) label += ' - ' + item.hours + ' hrs';
    return label.trim();
}

// Group equipment by category field
function groupEquipment(equipmentRows) {
    const groups = {};
    for (const item of equipmentRows) {
        const cat = item.category || 'other';
        if (!groups[cat]) groups[cat] = [];
        groups[cat].push(item);
    }
    return groups;
}

// Build equipment HTML
function buildEquipmentHTML(equipmentRows) {
    if (!equipmentRows || equipmentRows.length === 0) return '';

    const groups = groupEquipment(equipmentRows);

    const groupsHTML = Object.entries(groups).map(([cat, items]) => {
        const catLabel = CATEGORY_LABELS[cat] || cat.replace(/_/g, ' ');

        const itemsHTML = items.map(item => {
            const label = formatEquipLabel(item);
            const isNotable = NOTABLE_TYPES.some(n => item.equipment_type.includes(n));
            return `<span class="eq-item${isNotable ? ' hi' : ''}">${label}</span>`;
        }).join('');

        return `
            <div class="eq-group">
                <div class="eq-title">${catLabel}</div>

```

```

        <div class="eq-items">${itemsHTML}</div>
    </div>`;
    }).join('');

    return `
    <div class="sec">
        <div class="sec-title">Equipment & Systems</div>
        <div style="display:grid;grid-template-columns:1fr 1fr;gap:0 32px;">
            ${groupsHTML}
        </div>
    </div>`;
}

```

FIX 2: Equipment page number shows "EQ" instead of "03"

Current problem:

Page header shows "LITTLE ZEVS EQ" instead of "LITTLE ZEVS 03"

Fix:

Find where the equipment page is rendered and fix the page number:

```

// Equipment is on the SAME page as specifications (page 2)
// It should NOT have its own page number
// The equipment HTML is appended inside page 2 content
// There should be NO separate page for equipment

// If equipment is currently on a separate page – merge it into page 2:
// Page 2 content order: Specifications → Accommodation → Equipment & Systems
// All on one page, no page break between them

```

FIX 3: Blank space after Photography page

Current problem:

Photography page has one photo at top then large blank space below.

Fix — fill the space with more photos or remove the blank:

```

function buildPhotosPageHTML(photoUrls, yachtName) {
  if (!photoUrls || photoUrls.length === 0) return '';

  // Photo layout based on count:
  // 1 photo: full width, tall (120mm)
  // 2 photos: one tall top (90mm) + one full width bottom (60mm)
  // 3-4 photos: one tall top (90mm) + row of 2-3 below (55mm)
  // 5+ photos: top row 2 (55mm) + bottom row 3 (45mm)

  let photoHTML = '';
  const count = photoUrls.length;

  if (count === 1) {
    photoHTML = `

```

```

        <div class="ih-page">03</div>
    </div>
</div>
<div class="ib">
    <div class="sec">
        <div class="sec-title">Photography</div>
        ${photoHTML}
    </div>
</div>
<div class="ifooter">
    <div class="footer-disclaimer">Photos representative of vessel condition
    <div>
        <div class="footer-brand">YachtWorth</div>
        <div class="footer-powered">Powered by PDYE Group</div>
    </div>
</div>
</div>`;
}

```

FIX 4: Cover page — yacht name font weight too heavy

Current problem:

“Little ZEVS” on cover appears in bold/heavy weight.

Fix:

```

.cover-yacht-name {
    font-size: 42pt;
    font-weight: 200; /* ← must be 200 (thin), NOT 400 or 700 */
    color: #1a1a1a;
    letter-spacing: -2px;
    line-height: 0.95;
    margin-bottom: 10px;
}

```

SUMMARY

Fix	File	Change

1	proposalBuilder.js	Group equipment by category, format labels properly
2	proposalBuilder.js	Equipment on page 2, no "EQ" page number
3	proposalBuilder.js	Photos fill the page based on count
4	CSS	cover-yacht-name font-weight: 200

Do not change anything else.
